

# Experian Engineering

Building a better future with modern technology

Moied Wahid

# Technologist @ Heart

EVP, CTO

Bureau, Decisioning, Employer & Verification & Housing

**Experian unlocks the power of data to create opportunities for consumers, businesses, and society at life's big moments, helping to shape a better tomorrow.**

# Modernization Objectives

Resilient, Scalable & Secure Platform in Cloud to support Heterogenous workload for Real-time, Batch and Analytics Products

## No Client Disruption

Backward compatible **silent launch** approach to seamlessly migrate with no client disruption and no impact on current business operations

## Focus on Resiliency

**Zero downtime** and continuous **high availability** with intelligent self-healing **fault-tolerant** services fleet

## Security First Approach

**Shift left** philosophy with strict adherence to data security controls and policies. Strict Adherence to **Data Security & Policies**

## Operational Efficiencies

Operational efficiencies to **reduce costs** leveraging automation, and **DevSecFinOps**

## Embrace Emerging Technologies

Leverage **AI & ML** to transform business operations and user experiences with **SRE and fail fast approach**

# Technology Modernization Patterns

## Rehost Rebuild

- No Code change
- Same Tech stack
- No Hardware Dependency
- DB, App, and OS are Cloud Ready
- Lift & Shift for IaaS

## Replatform

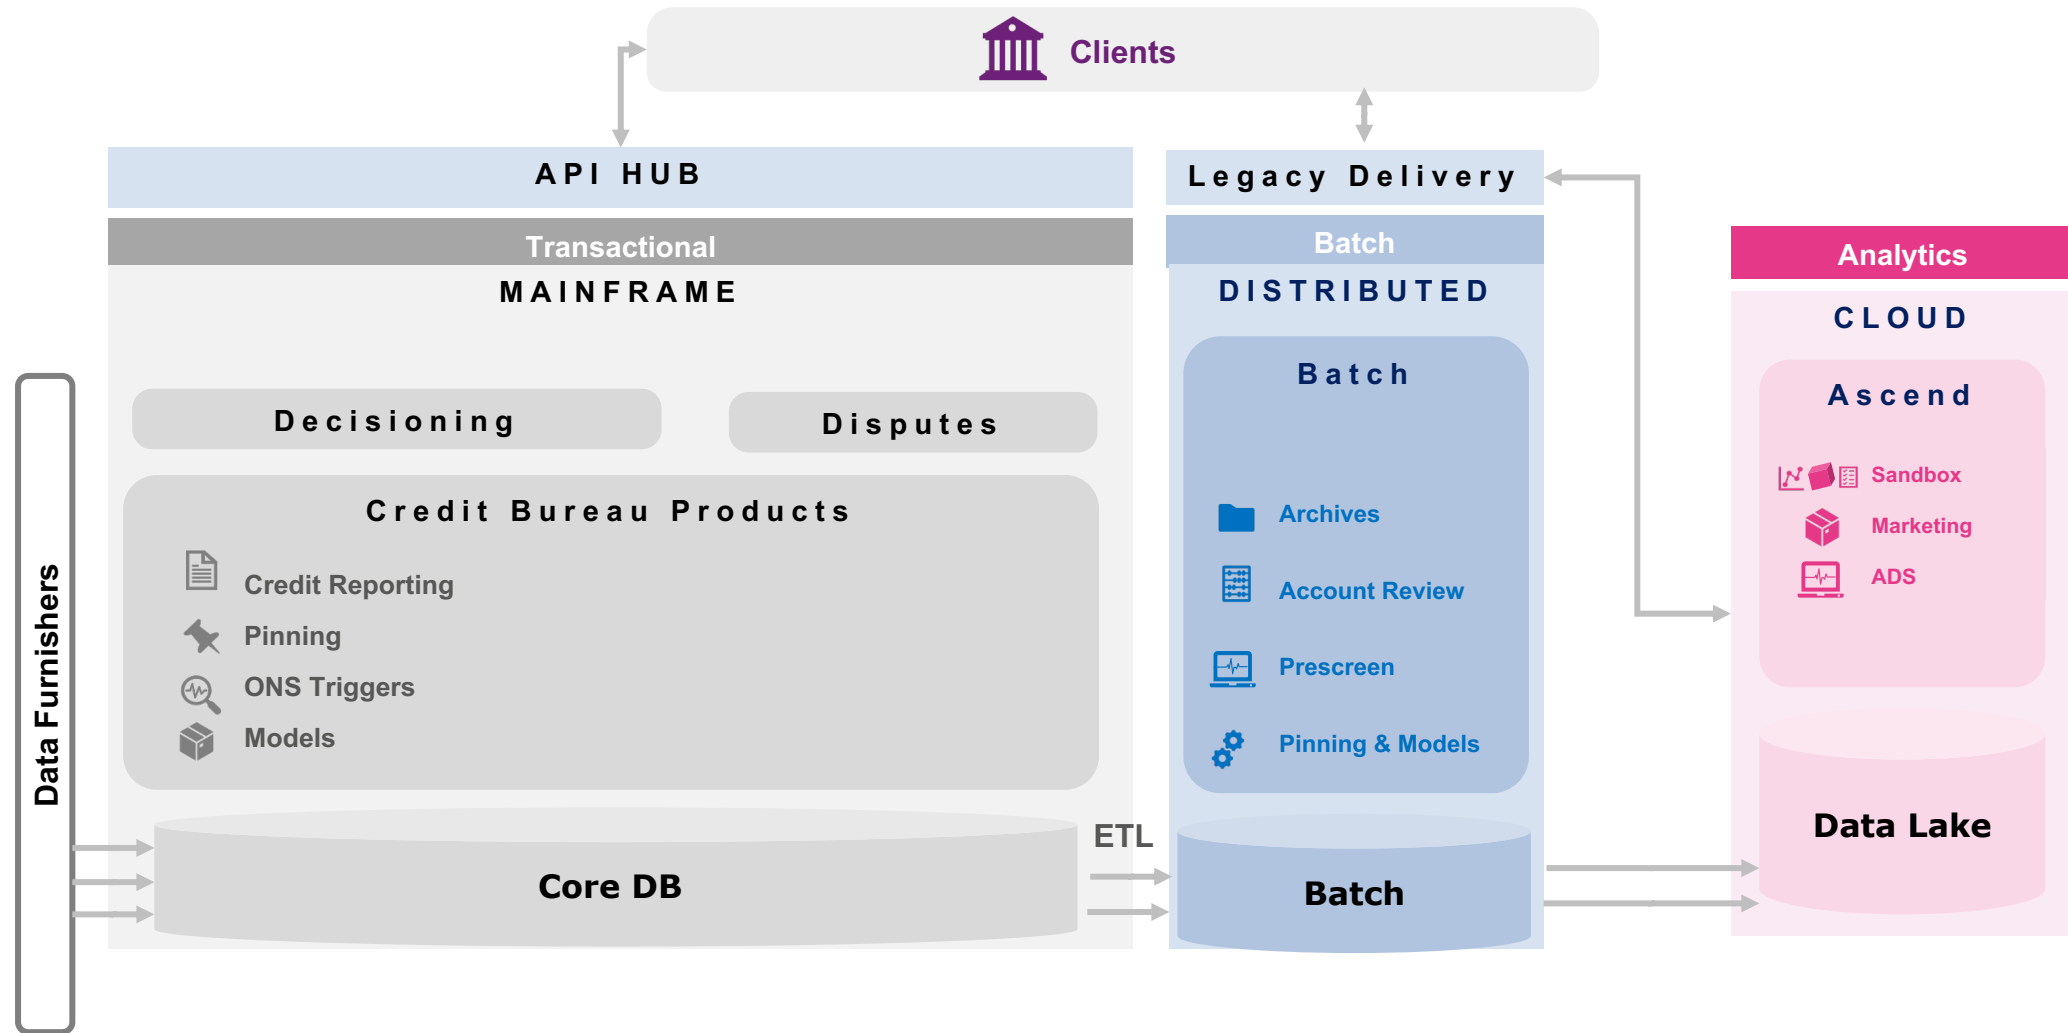

- Minimal Code Changes
- Same Tech Stack
- App, Server, OS, DB, Middleware upgrade required
- Containerization & PaaS required

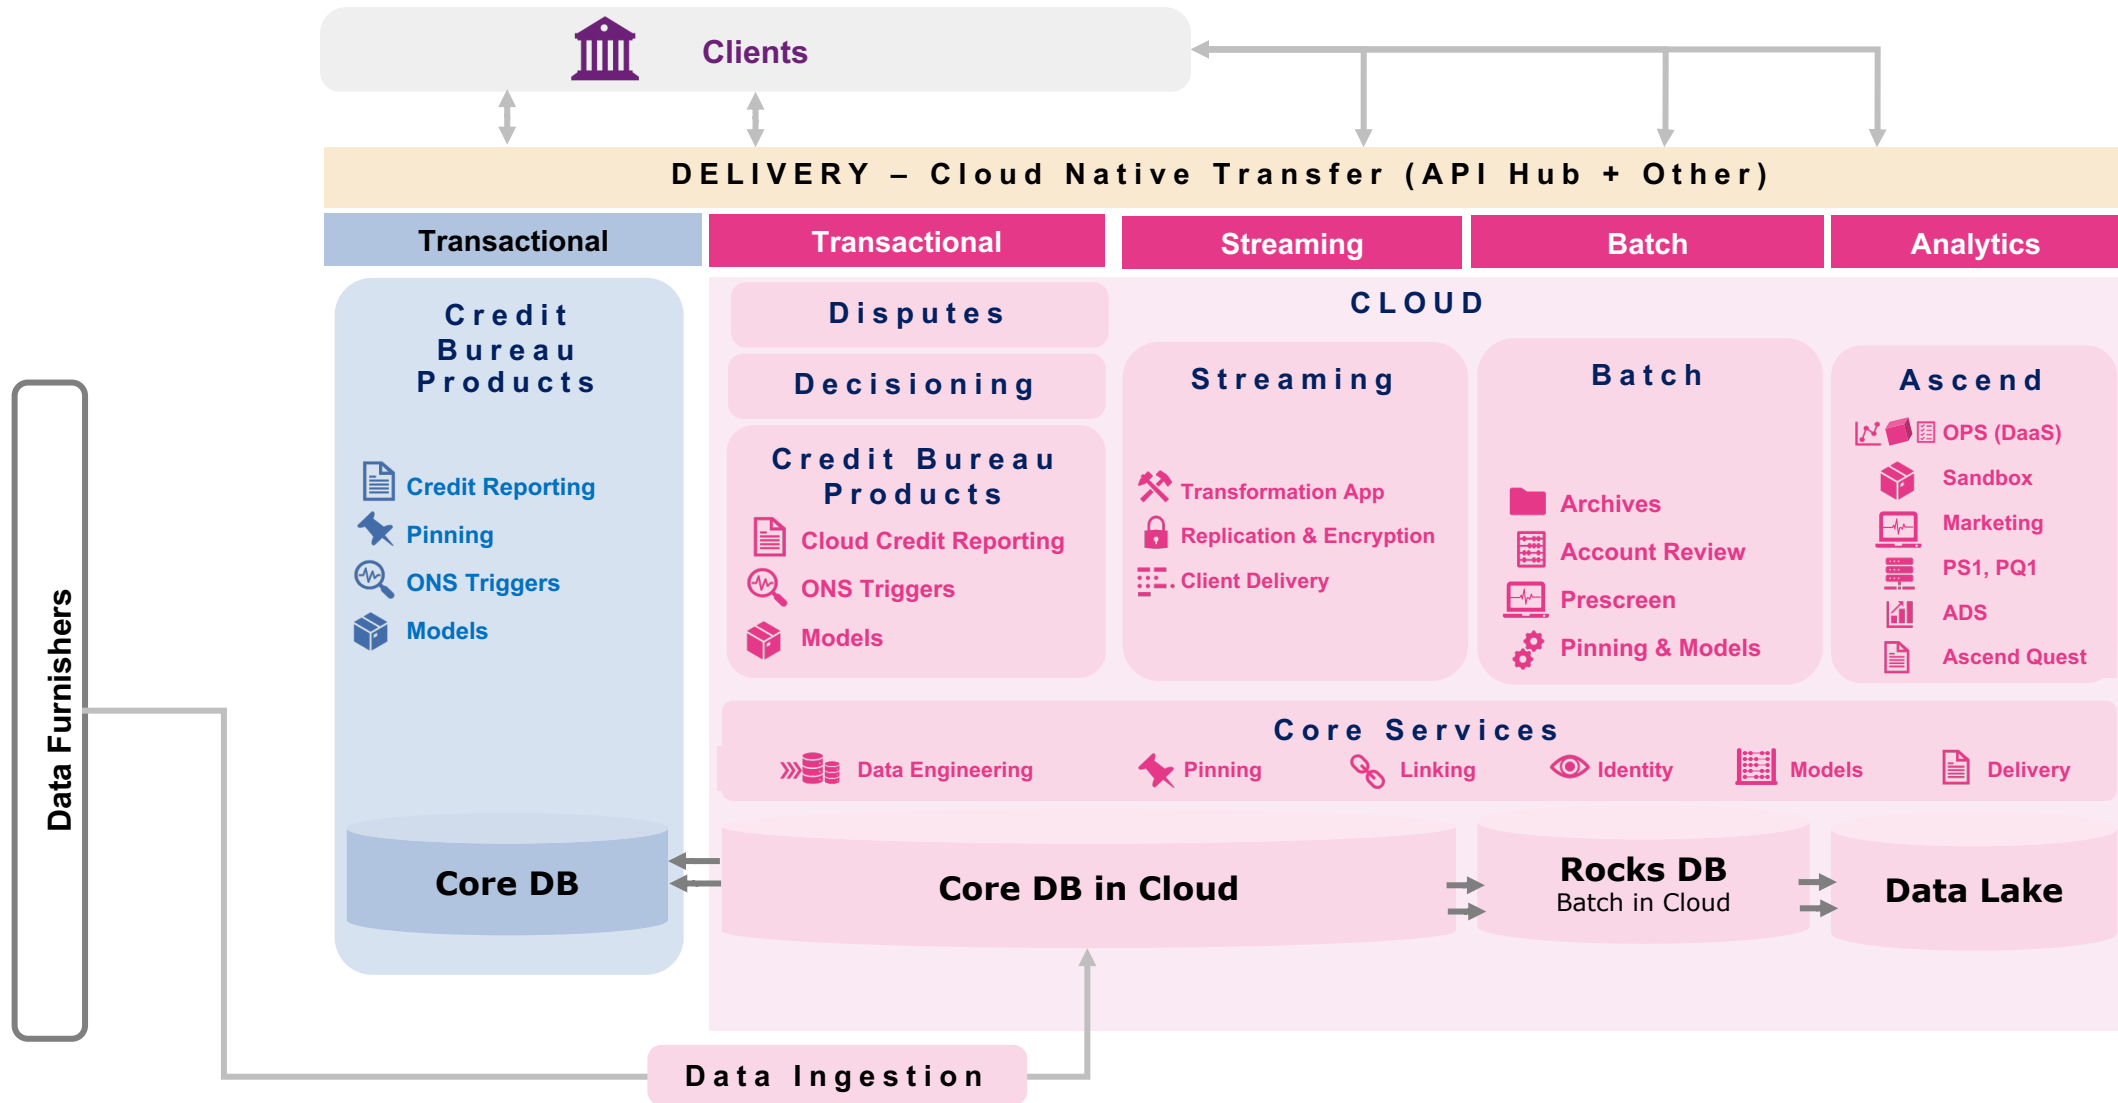

## Refactor Rearchitect

- Major Code Changes
- Modern Tech Stack
- Containerization Conversion Required
- Application Architecture changes

# Our Approach - Previous State (1 of 2)

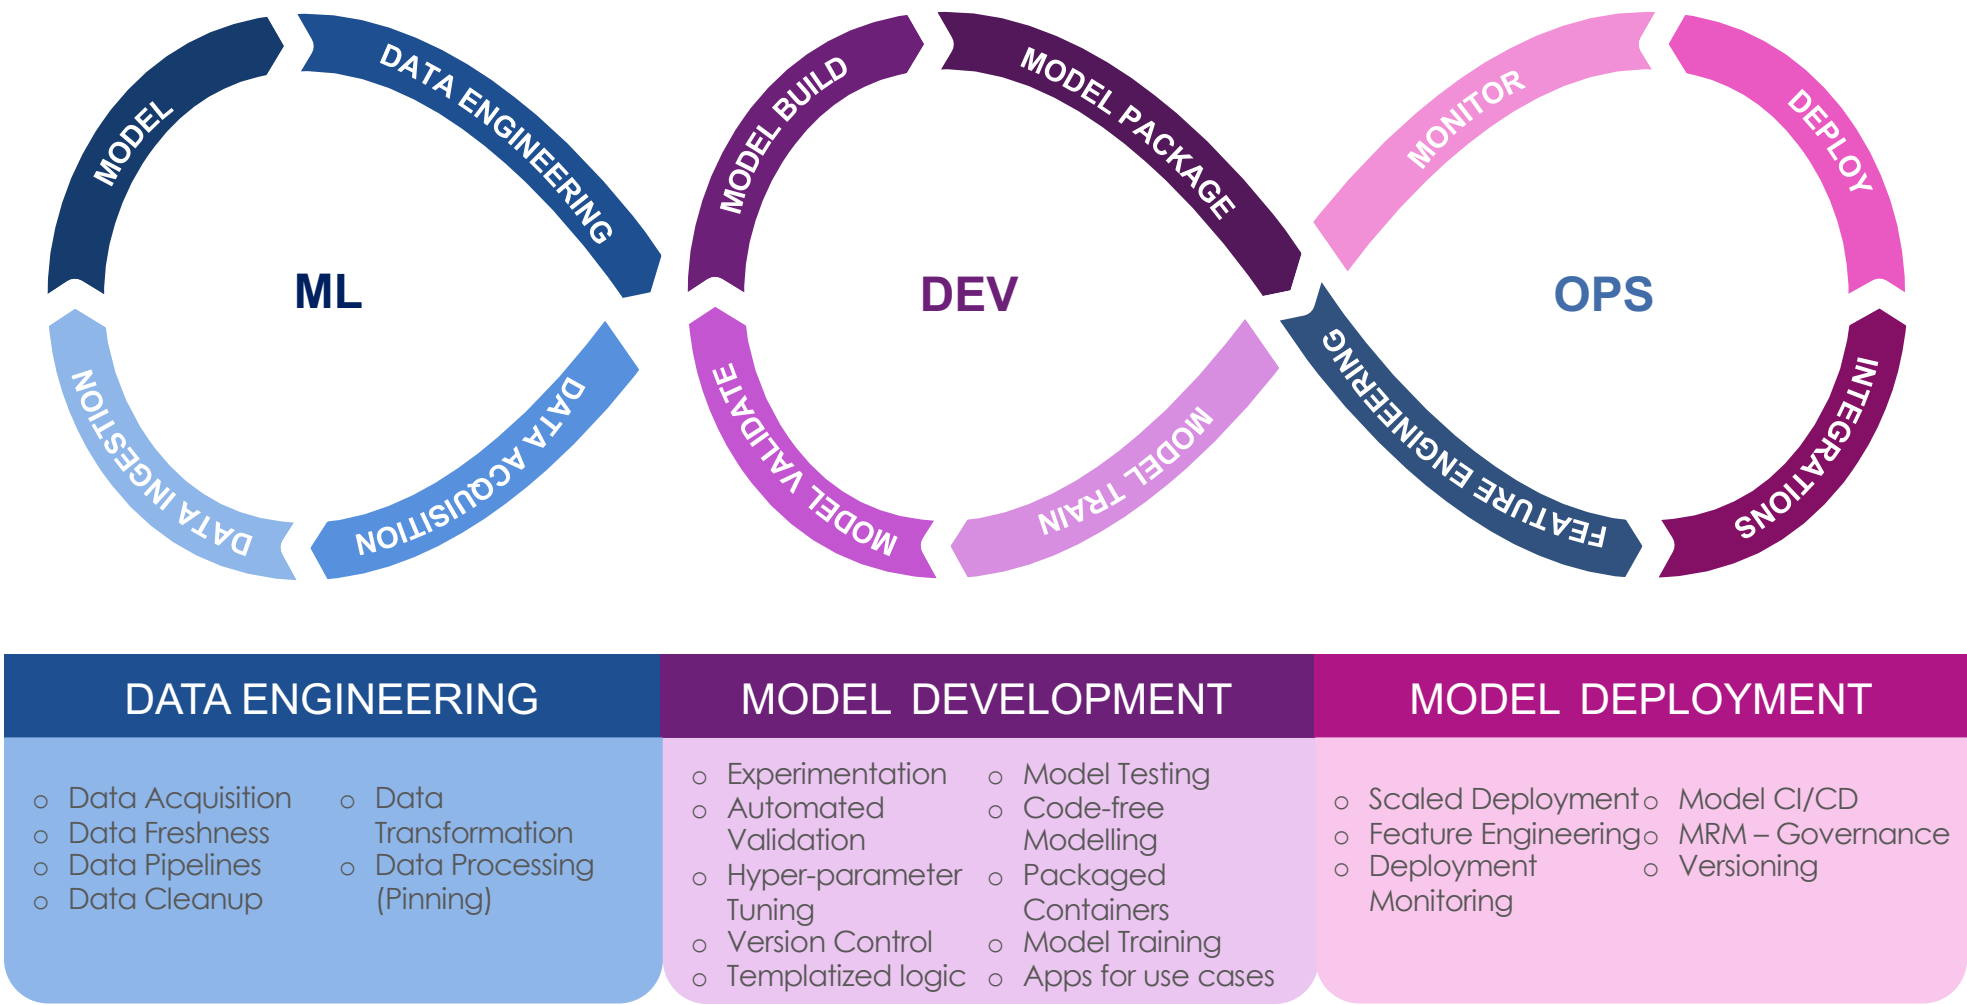

# Our Approach – Future State (2 of 2)

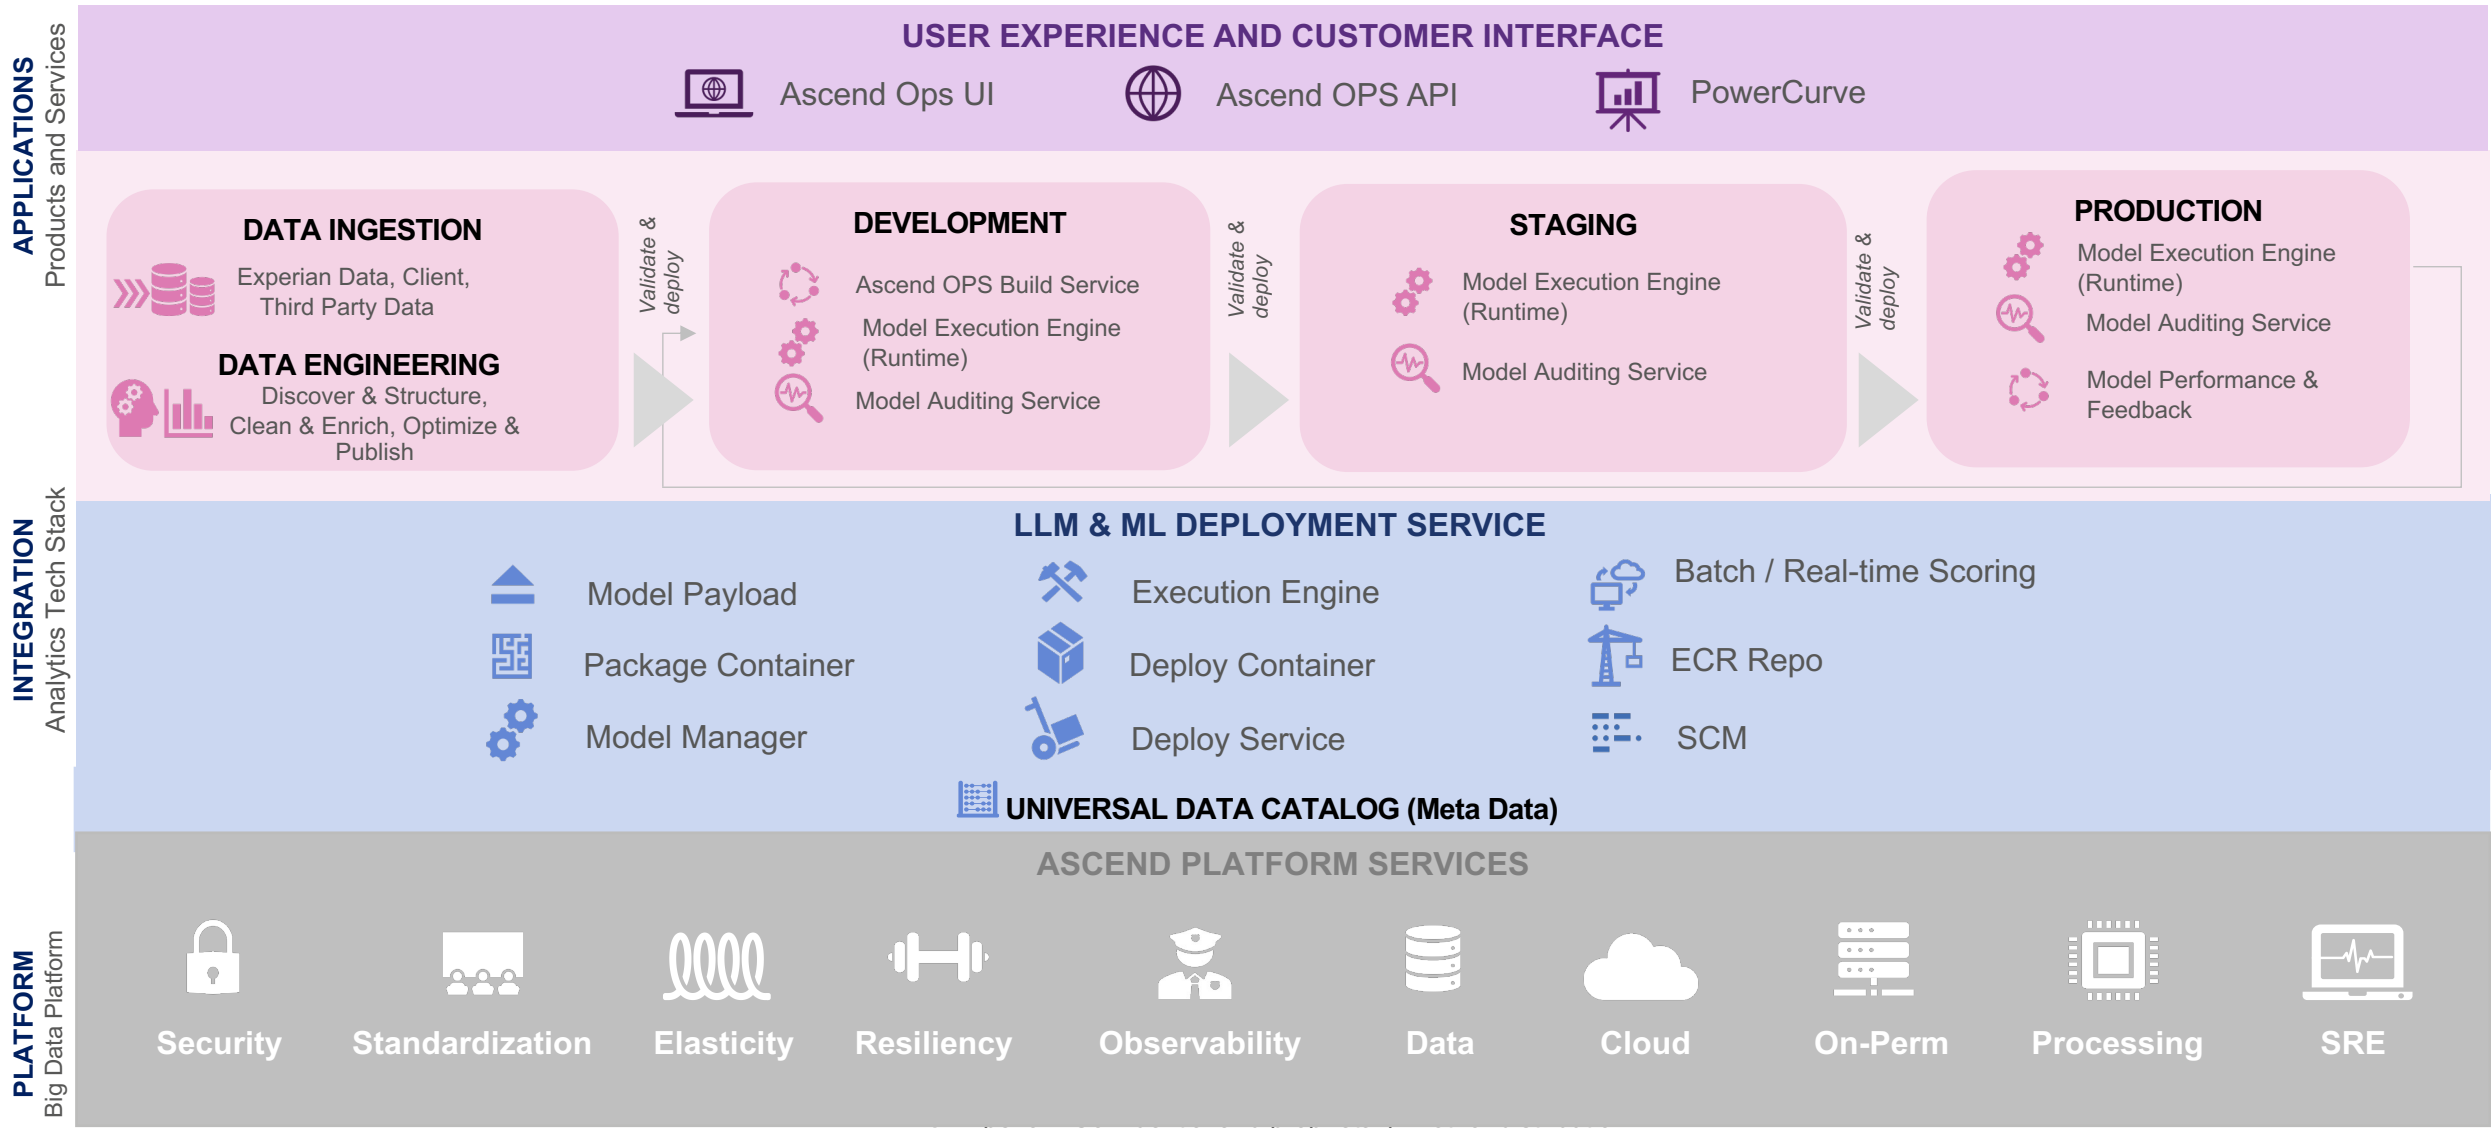

# AI/ML Ops in Action

# Ascend OPS - Analytics Operations in Action

Game changing MLOps capability to build, deploy, monitor and execute custom models from Sandbox to Production

# Our Lessons Learned & Best Practices

## Long Term Architecture (LTA)

Alignment with LTA to maximize reuse, implement DevSecFinOps and leverage Open Architecture

01

02

## Engineering Excellence

Writing code, peer reviews, deep-engineering, solving hard problems

## Talent Management

Target Operating model changes, Talent upscaling

03

04

## Rainforest Effect

Culture of experimentation, SRE, accountability & excellence

## Customer Centricity

Focus on customer value, impact, convenience, communication and cost efficiency

05

# Engineering Transformation

## Where We Were Before

- ❖ Monolithic Platform
- ❖ Waterfall Development
- ❖ Scattered Prioritization
- ❖ 5 Releases per year
- ❖ Manual Testing
- ❖ Traditional Operations
- ❖ Traditional Deployments
- ❖ Reactive Monitoring

## Where We Are Today

- ❖ Microservices Architecture
- ❖ Agile & Kanban
- ❖ Streamlined Prioritization
- ❖ 50+ Releases and Daily on Cloud
- ❖ Test-Driven Development Automation testing
- ❖ CI/CD, Shift Left, DevSecFinOps
- ❖ Containers Deployment
- ❖ SRE Enablement

# Thank you
